

# Cotton: World Markets and Trade

## China Begins 2021 State Reserve Sales

Sources: China Cotton Association and other trade sources

On July 5, China began its 2021 round of sales from its cotton State Reserve (SR). The sales program was not completely unexpected, but the official announcement of the sales was made just days before sales started. Rumors of imminent sales had been circulating in the market for several months, and Reserve sales in past years had tended to begin earlier in the year.

The announcement indicated that 600,000 tons (2.75 million bales) would be made available through the end of September, which represents about 20 percent of the estimated total held by the SR. Total stocks are estimated to be 1.5 to 1.7 million tons of foreign cotton (primarily U.S. and Brazilian), 1.1 million tons of Chinese cotton from the 2011-2013 crops, and 375,000 tons from the 2019 crop. The announcement indicated that sales would be limited to 2011/12/13 domestic stocks. The size of this season's offering is only slightly higher than the 500,000 tons offered in 2020 and well below the 1.0 million tons made available in 2019.

This year's sales mechanism is similar to previous years. Lots are offered every business day through an electronic auction platform. Minimum reserve prices for each lot are set based on domestic and international prices in addition to quality adjustments. An additional mechanism was introduced this year – if domestic prices drop by more than 3.5 cents/lb in a 3-day period, sales will be suspended until prices recover. Just under 10,000 tons have been offered each day.

These sales are part of a policy to rotate cotton held in the SR and will be partially offset by foreign cotton acquired by the SR in late 2020 and early 2021. Even if the entire 600,000 tons is sold, the size of the SR will increase this year as the amount of cotton acquired since the 2020 sales is believed to be more than the potential 2021 sales. Over the last 3 years, the size of the SR has fluctuated around 2.75 million tons, roughly the amount that would be held if this season's sales are robust.

As with previous years' sales, early sales have been very strong with 100 percent of the amounts offered being sold in the first week. This is similar to recent years' auctions which also showed very strong early season sales.

China announced in May that 700,000 tons of Sliding-Scale import quota would be issued later this year; industry expectations are that the licenses will likely not be issued until after the SR sales end but before the arrival of the 2021 crop. Therefore, the volume of 2021 SR sales will largely reflect the current level of demand for cotton in China.

## **2021/22 Outlook**

For 2021/22, the July forecast shows higher consumption with lower trade and stocks. Stronger cotton yarn prices and profit margins are expected to support larger consumption in India and Vietnam. Brazil's lower exportable supplies and smaller China State Reserve imports are expected to shrink global trade slightly. Stocks are projected down more than 1.5 million bales, led by China and India.

The U.S. forecast shows higher production, exports, and ending stocks. The U.S. season-average farm price is unchanged at 75 cents per pound.

## **2020/21 Outlook**

Global production and ending stocks are lowered from last month. Record global trade is boosted, led by robust demand in Pakistan, Vietnam, and Turkey. Record Brazil exports are raised due to strong late-season shipments, and India exports are forecast at their highest level in more than 7 years.

The U.S. estimates are unchanged. The U.S. season-average farm price is lowered one-half cent to 66.5 cents per pound.

For current prices received by farmers click here: [NASS farm price](#)

## **Prices**

The A-index edged higher but the U.S. spot price was mostly unchanged from the previous month. NASS plantings were mostly in line with trade expectations, capping any significant upward movements. Robust global demand continues to support cotton prices despite downward price movements for corn, wheat, and soybeans.
