

COVID-19 PPE

HELP STOP THE SPREAD

Parkdale Mills is proud to support our nation's fight against the spread of COVID-19. We have partnered with textile mills in the USA and Western Hemisphere to produce and supply critical PPE.

The CDC recently recommended that all citizens wear face-masks to stop the spread of COVID-19.

This mask provides protection against large droplets, splashes, or sprays of bodily or hazardous fluids.

A significant portion of individuals with coronavirus are asymptomatic. This mask helps prevent the transmission of the virus to others before showing symptoms.

While not an N95 mask or respirator, the daily use of this facemask is vital to combat the contagious nature of the COVID-19 virus.

Not suitable for medical environments.

Our mask is not an N-95, a surgical mask, nor a respirator. This mask is not FDA approved. Masks do not provide the wearer with reliable protection from inhaling smaller airborne particles and are not considered respiratory protection. FDA recognizes the urgent need for face masks in the setting of the COVID-19 pandemic due to increased use and shortages of their availability. We recommend against the use of these face masks for use in a surgical setting or where significant exposure to liquid, bodily, or other hazardous fluids may be expected. We make no claims of antimicrobial or antiviral protection. We make no claims of infection prevention or reduction. We make no claims regarding flammability. We make no claims regarding fitness for any particular use (including, without limitation, for medical purposes). If skin irritation occurs, immediately stop using the face masks and consult your primary healthcare provider. Exercise caution when wearing face masks if you have lung disease, heart disease, or similar condition. If in doubt, consult your primary healthcare provider.
