

Cotton: World Markets and Trade

China State Reserve Auctions Remain Strong

Sales from China’s State Reserve have remained very strong, despite rising prices. As of July 8 sales totaled 1.184 million tons, with over 97 percent of the cotton offered finding buyers. All of the cotton offered since June 28 has been sold. Nearly all of the cotton being offered in recent weeks has been domestic. Early commentary on reserve sales suggested strong purchases in early May could have been driven by the large imported volumes on offer, but continuing high sales with only domestic offerings suggest demand is more broadly-based than previously considered.

The base sale price has risen steadily and has reached just under 90 cents per pound. Even at this higher level, the base price remains less than the TRQ duty and VAT-inclusive import price of many available West African, Australian and U.S. growths, suggesting there is room for prices to move even higher if demand persists. To date, even with reserve sale prices well above initial levels and above what many observers expected prior to auctions beginning, import demand has not shown any appreciable move upwards. Thus, while strong auction sales speak to significant domestic demand and tight pre-auction stocks, there is not yet evidence of demand sufficient to markedly increase imports.

Volumes offered and resulting sales remain at levels consistent with the officially-announced 2-million-ton sales target being met just before the end of August, the announced cut-off for reserve sales. With these strong continuing auction sales and other market data indicating more mill use than previously thought, USDA has revised China’s consumption forecast up substantially.

Overview

For 2016/17, world production and beginning stocks are forecast down, due to lower production in India and Pakistan which more than offset higher production in the United States and Australia. Consumption is forecast higher due to a large increase in China being only partially offset by declines in India and Pakistan. World trade is higher, largely on the smaller crop in Pakistan pushing up import demand. U.S. production is up sharply on higher planted area and continued favorable weather. Higher exports and lower beginning stocks more than offset the increase in production and ending stocks are forecast down. The U.S. season-average farm price forecast is raised 2 cents to 59 cents/pound.

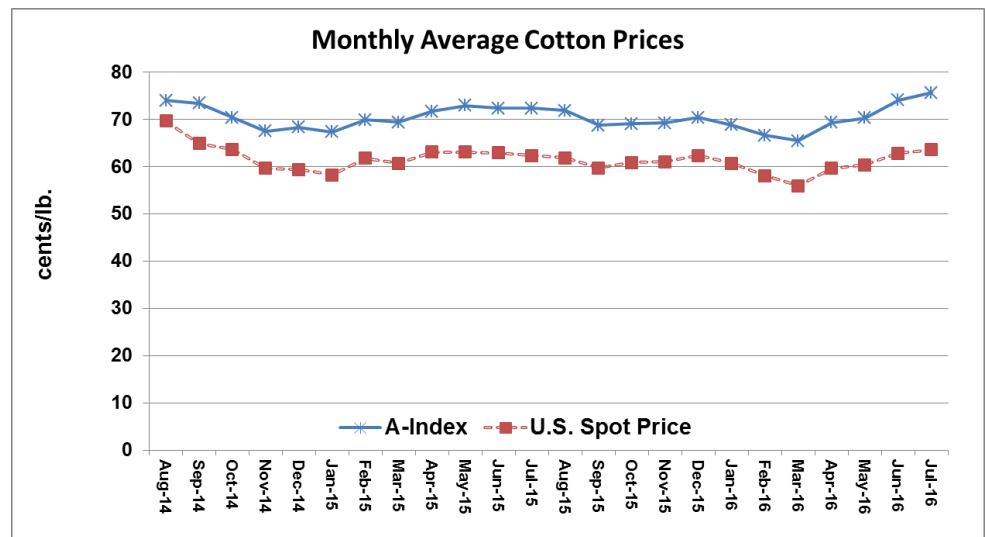

For 2015/16, world consumption is raised, largely due to higher demand in China, resulting in lower ending stocks. Global trade is largely unchanged. U.S. exports are raised to 9.2 million. The U.S. season-average farm price is unchanged at 58 cents/pound.
