

# Cotton: World Markets and Trade

## Record Global Supply Drives Record Stocks Outside of China

USDA’s first forecast for the 2020/21 marketing year shows record global supply driving use higher as countries begin to recover from the COVID-19 pandemic (See the April 2020 circular entitled “[COVID-19 Spurs Record Downward Adjustments to Global Demand](#)” for more information regarding COVID-19’s effects on global cotton demand). Global consumption is expected to rebound 11 percent to more than 116 million bales from the largest recorded drop in USDA’s PS&D database; however, use is projected only slightly above the 5-year average.

All top ten consuming countries are expected to witness growth as uncertainties regarding the pandemic diminish. China and India are forecast to expand consumption by 7 million bales combined, accounting for more than two-thirds of growth in global use. Lingering disruptions are expected to cap global use to below levels witnessed 2 and 3 years prior when global consumption registered at more than 120 million bales.

Spending on cotton products including clothing and home furnishings is highly correlated to changes in GDP. Recovery in global cotton demand will depend on reopening of retail outlets and employment conditions in each country. Global cotton end-use (e.g., world retail sales of cotton clothing and furnishings) in 2019/20 has plummeted due to consumer reluctance to congregate in stores, lost income, widespread stay-at-home orders, and the closure of many “non-essential” businesses including apparel stores.

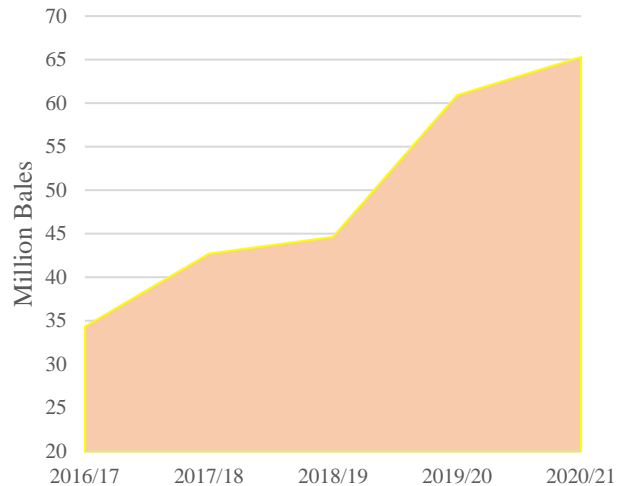

Global ending stocks are forecast slightly higher with the 2021’s third-largest-ever carryin expected to boost global reserves to nearly 100 million bales, almost 20 million bales above 2 years earlier.

Although China is forecast to account for roughly one-third of global stocks, this is a historically low percentage. Government reserves are expected to remain at near current levels and well below the 5-year average. However, private inventories will remain high.

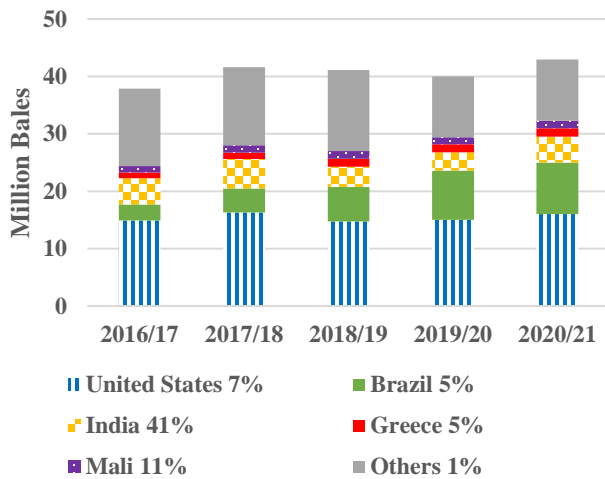

Stocks outside of China in 2020/21 are forecast to break the current year's record. India has accumulated over half the increase in stocks since 2018/19 as its price support program builds stocks.

World trade is expected to expand significantly in 2020/21. The United States, Brazil, and India are expected to capture the lion's share of the expanded export opportunities. All three countries will have record or near-record exportable supplies due to large crops and very large carryin stocks.

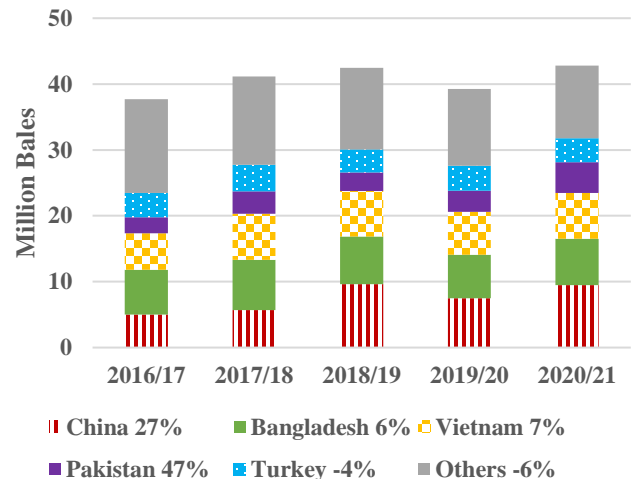

**Stocks (Less China) Reach Record High**

**World Exports Up 7%**

**World Imports Up 9%**

Expanded world trade will be driven by higher import demand resulting from the recovery in consumption. Imports in nearly all major importing countries are expected to rise. China's imports are expected to expand by nearly 20 percent, owing to a continuing shift in its State Reserve policy. Instead of reducing stocks, the Reserve's objective is to rotate its stocks and thereby indirectly drive greater import demand as it reduces net sales from the Reserve. Pakistan imports are also expected to grow sharply as use recovers while production remains at a lower level. Large carryin stocks in India and Turkey are projected to dampen import demand and thereby offset year-over-year growth.

The U.S. season-average farm price for 2020/21 is forecast at 57 cents per pound, 2 cents below the 2019/20 price.

## 2019/20 Overview

For 2019/20, the May forecast shows lower global consumption and trade with sharply higher ending stocks. Consumption has been lowered more than 5 million bales this month and over 13 million since the March 2020 forecast due to the ongoing effects of COVID-19. Lower global trade reflects these downward revisions; global ending stocks are up nearly 6 million bales from last month, reflecting collapsing use. The U.S. forecast has higher production and lower consumption with higher ending stocks. The U.S. season-average farm price is unchanged at 59 cents per pound.

## Prices

The A-index and U.S. spot price have edged up slightly from April's WASDE owing to stronger financial markets including the S&P Retail Index, in addition to market speculation regarding purchases for U.S. cotton. The April A-Index was the lowest monthly average in 11 years, reflecting the severe expected impacts from COVID-19 on global cotton demand.
