

Cotton: World Markets and Trade

India: Record 2020/21 Stocks Despite Higher Consumption

2019/20 Consumption Dips While Stocks Almost Double

India's 2020/21 stocks are forecast to surpass the previous year's record despite a recovery in consumption from COVID-19's significant effects in 2019/20. India's stocks are forecast to more than double in the current year amidst the highest production in 6 years, a 4-million bale plunge in consumption, and a decline in exports. These factors have lowered domestic prices on the domestic MCX cotton contract more than 20 percent from last June, and pressured export bids to a significant discount to all origins.

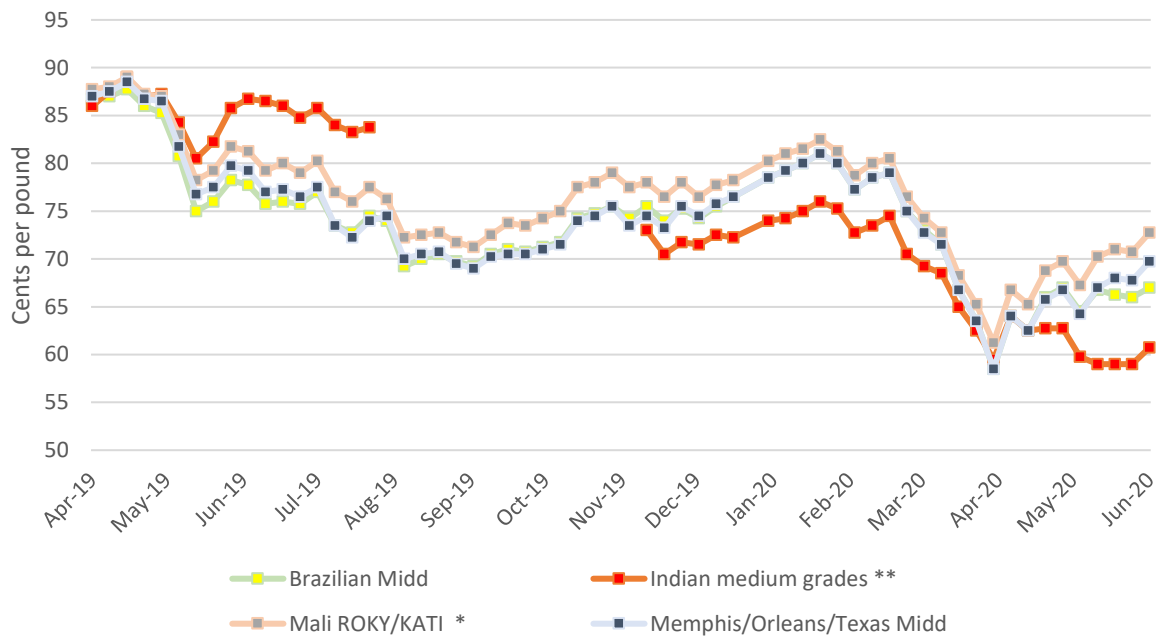

For cotton lint exports, India's first 6 months of shipments were down nearly one-fifth from the previous year. The 5-year pattern for shipments shows nearly 40 percent of exports occur in 2 months – December and January. The 2019 border closure with Pakistan (a major importer) affected exports along with reported quality issues, which helped sustain Indian quotes as the world's lowest. Moreover, quarantine restrictions are reportedly slowing exports to neighboring Bangladesh. Since the start of the calendar year, Indian medium-grade bids are at significant discounts to Brazil and U.S. medium grades.

India's cotton yarn exports are more than 15 percent below the previous year for the first 7 months of 2019/20. China was India's largest export market last year, but its yarn demand has fallen and India's market share has also declined. China imports of cotton yarn from India nearly halved from the previous year (August to April).¹

¹ Raw cotton and cotton yarn exports accounted for around one-fifth of India's 2018/19's total use

India Quoted at Significant Discounts

Source: Cotton Outlook

For domestic consumption, while COVID-19 significantly impacted all major cotton consuming countries, India is forecast to have the second-largest drop in consumption after China. Spinning mill operating rates were reported to have plunged from the second half of March to mid-May. Even before the pandemic took hold, domestic demand was limited as the country's 2019/20 consumption prospects were mostly unchanged from the previous year, despite a crop that jumped nearly one-fifth.

Another significant contributor to the record stock level is the MSP (Minimum Support Price) program that's driven the procurement of over 7 million 480-lb bales. The Cotton Corporation of India (CCI) procures and markets Indian cotton when domestic prices undershoot the MSP, and CCI has already offered supplies at bulk discounts to help spur demand. In addition to the record buying of the 2019/20 crop, it's suspected that once previously-purchased stocks are included, public stockholders hold over 8 million bales.

Looking at 2020/21, a larger MSP for the 2020/21 crop is expected to sustain India's record supplies as the global economy recovers from the COVID-19 epidemic. Furthermore, the recovery in consumption will not be enough to offset record 2020/21 stocks, as India is the most significant contributor to record stocks outside of China.

With MSP stocks expected to account for nearly half of beginning stocks and likely future purchases by CCI of the 2020/21 crop, the extent to which CCI markets its current supplies before and during its next procurement may influence global prices. This is amidst a significant carryin from the world's two

largest exporters – a record for Brazil and the highest U.S. levels in 12 years. These factors are expected to pressure global prices in 2020/21.

2020/21

For 2020/21, the June forecast shows lower use with higher beginning and ending stocks. Production is lowered for Turkey and Uzbekistan, more than offsetting gains in Argentina and Tanzania. Consumption is also lowered due to weaker demand for the second consecutive month in China and India among others. Global trade is mostly unchanged. The U.S. forecast shows lower consumption and higher ending stocks, and the season-average farm price is unchanged at 57 cents per pound.

For current prices received by farmers click here; [NASS farm price](#)

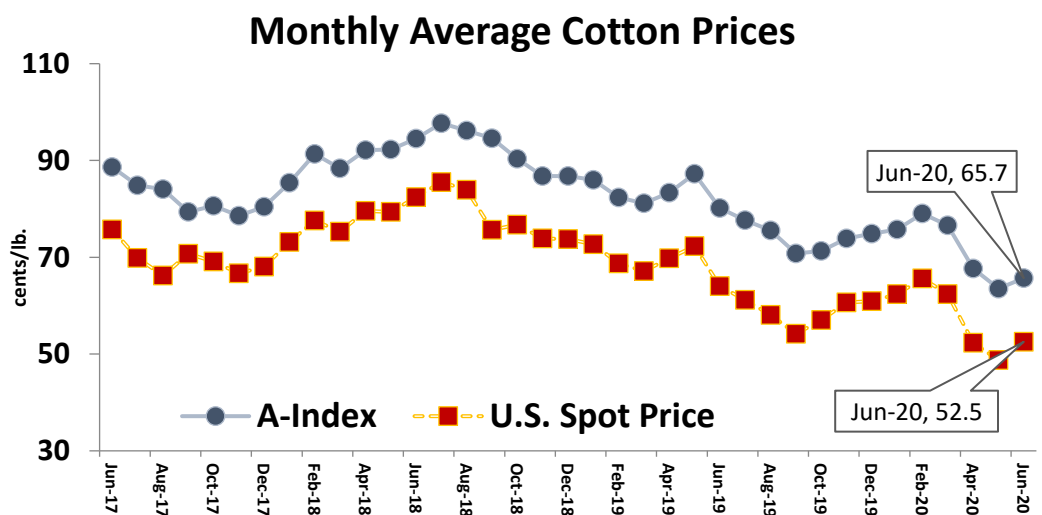

2019/20

For 2019/20, the June forecast shows lower use and higher ending stocks for the third consecutive month. Production is raised for Argentina and Tanzania, more than offsetting losses in Turkey. Consumption is lowered due to weaker demand and repeated downturns in China and India. Global imports are up slightly with greater demand in Turkey, India, and Pakistan. The U.S. forecast shows lower consumption and the U.S. season-average farm price is unchanged at 57 cents per pound.

Prices

The A-index and U.S. spot price have risen since last WASDE but remain below the season average. Strong China purchases of U.S. cotton and a climbing S&P Retail Index have strengthened the July ICE contract, with prices climbing for the second consecutive month. However, the December contract is below July and reveals a negative carry in the market.
