

Cotton: World Markets and Trade

China: Strong Consumption and State Reserve Demand Drive 2020/21 Imports to 7-Year High

China's 2020/21 imports are forecast at a 7-year high, driven by the highest projected consumption in 3 years, robust State Reserve (SR) imports, and attractive prices for imported cotton relative to domestic supplies.

Imports are expected to support China's record year-over-year rise in consumption. China's 2020/21 consumption is expected to recover from the lowest level in 16 years to surpass the previous year by 7 million bales, accounting for half of the gain in global use. Currently, spinners' spot margins are roughly 30 percent higher compared with the previous year due to robust demand for cotton yarn and significantly lower yarn stocks.

The highest SR imports in 7 years are also supporting strong China demand. Zero SR purchases of domestic cotton were reported for the December 2020 to March 2021 program and therefore recent imports are expected to further replenish SR supplies.¹ U.S. cotton is suspected to account for most of SR imports in 2020/21 – instead of Brazil, the primary supplier in the previous 2 marketing years. The preference for U.S. cotton may have been partly spurred by the Phase One Agreement.

2020/21 China Imports by Origin (Aug-Apr)

¹Zero purchases owing to the program's purchasing constraints which depend on international prices (i.e. A-Index) relative to domestic.

Favorable import prices have also played a role. China's widely used domestic price index (CC3128B) was 12 cents higher than a "landed" A-Index price (1 percent in-quota duty plus 9 percent VAT) in May 2021. This is more than 10 cents higher compared with the same period last year. The stronger relative prices for China's domestic supplies have been driven by stronger agricultural prices in China (e.g., corn and wheat), quality issues with China's 2020/21 crop, and a weaker U.S. dollar.

China's 2021/22 imports are forecast down from the previous year as State Reserve demand is projected to fall from the robust levels witnessed thus far in 2020/21. Nonetheless, 2021/22 imports are forecast at the second-highest level in 8 years, helping to support larger consumption that is projected to be equivalent to one-third of global use.

2021/22 Outlook

For 2021/22, the June forecast shows higher trade and consumption with lower production and stocks. A lower consumption outlook for India is more than offset by higher expected demand in China, Bangladesh, and Turkey which is driving higher imports for these countries.

The U.S. season-average farm price is unchanged at 75 cents per pound.

2020/21 Outlook

Global production and consumption are raised marginally from last month. Record global trade is boosted, led by robust demand in China, Bangladesh, and Turkey. Exports are raised for the three largest exporters – India, Brazil, and the United States.

The U.S. forecast has higher exports and lower projected ending stocks – stocks are projected at their lowest in 4 years. The U.S. season-average farm price is lowered 1 cent to 67 cents per pound.

Prices

The A-index and U.S. spot price were mostly unchanged from the previous month. Buoyant global demand and strong U.S. exports supported higher prices, but additional precipitation in Texas (the largest cotton-producing state) capped any major upward movements.
