

# Cotton: World Markets and Trade

## Highest U.S. Cotton Exports in 15 Years

U.S. exports in 2020/21 were the highest in 15 years at 16.4 million bales and spurred by record global imports. China eclipsed Vietnam as the largest destination for U.S. cotton for the first time in 6 years at more than 5 million bales, accounting for roughly one-third of U.S. shipments. However, U.S. exports to eight of its ten largest markets were down from the previous year.

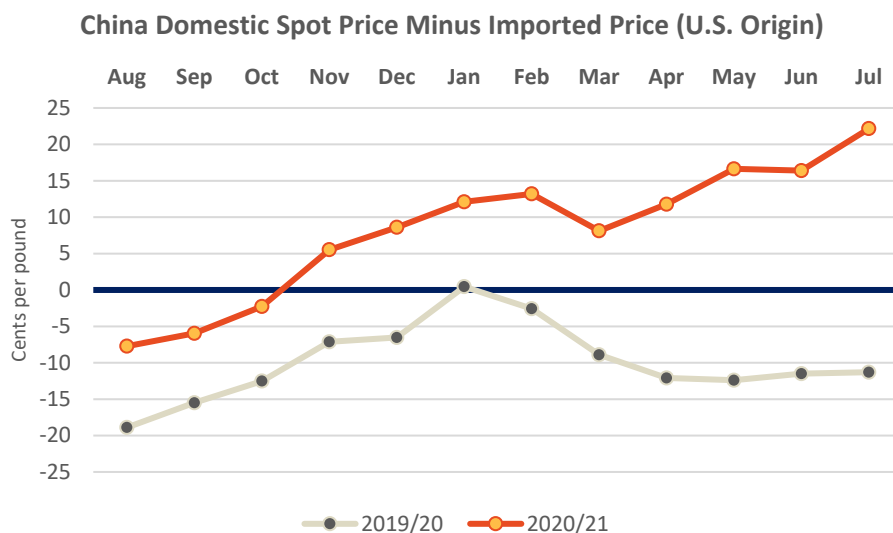

## Monthly USDA Forecast for United States

Record U.S. shipments through December boosted total exports as early season shipments were buoyed by the highest beginning stocks in 12 years. Shipments were strong, especially to China, despite U.S. 2020/21 production falling 5.3 million bales from the previous year.

U.S. exports to China were the largest in 8 years with demand for U.S. cotton mostly led by China’s State Reserve. U.S. cotton was estimated to account for almost 90 percent of State Reserve imports and nearly one-half of China’s total imports in 2020/21. Instead of sourcing from Brazil, the primary supplier in the previous 2 marketing years, the State Reserve returned to the United States, in part facilitated by the Phase One Agreement.

Relative prices (i.e., China cotton prices compared with U.S. cotton prices) also played a role. China’s spot price (CC3128B) was significantly higher than imported prices (U.S. origin) in 2020/21 compared with the previous year. Although higher domestic prices prevented the Reserve from purchasing domestic cotton, imports were an especially attractive option compared with the previous year (see chart below). Imported U.S. cotton averaged 10 cents higher than domestic China cotton in 2019/20, but in 2020/21 was approximately 8 cents cheaper (on average). Higher prices in China relative to international were likely due to: (1) higher agricultural prices in China (e.g., corn and wheat), (2) quality issues with China’s 2020/21 cotton crop, and (3) the yuan appreciating roughly 10 percent against the U.S. dollar.<sup>1</sup>

U.S. 2020/21 exports were the largest in 15 years; however, it was also a record year for global imports. Bangladesh, Vietnam, Pakistan, and Turkey, rounding out the top 5 largest global imports (China being the largest), were all estimated to have had record imports in 2020/21. Higher yarn prices and rising global demand for cotton products spurred imports and cotton consumption. Brazil and India helped supplant U.S. exports in these respective markets; Brazil’s 2020/21 exports exceeded the previous year’s record by roughly 2 million bales, and India is projected to register its highest exports in 7 years.

U.S. 2021/22 exports are forecast down from the previous year at 15.5 million bales, despite a larger crop at 18.5 million bales, with both lower U.S. carryin and global imports more than offsetting. China is once again forecast as the world’s largest importer at 10.0 million bales, but down more than 2.8 million from the previous year.

<sup>1</sup> U.S. Dollar Index also fell roughly 10 percent in 2020/21 compared with previous year.

## **2021/22 Outlook**

Global beginning stocks are lower this month. Lower crops in India, Togo, Greece, and Benin more than offset increases for the United States, Australia, and Argentina. Use is raised slightly with higher consumption growth in Pakistan, Bangladesh, Turkey, and Brazil while down slightly in Vietnam. Global trade is higher on larger exports for the United States, Australia, and Turkey. Pakistan imports are raised for the third consecutive month to another record, this time 5.9 million bales.

U.S. production, exports, and ending stocks are raised from last month. The U.S. season-average farm price is raised 4 cents to 84 cents per pound, which would be the highest since 2011/12.

For current prices received by farmers click here: [NASS farm price](#)

## **2020/21 Outlook**

Global ending stocks are lower due to larger consumption in Pakistan, Bangladesh, and Indonesia. Record global trade is raised led by higher imports for China and Bangladesh.

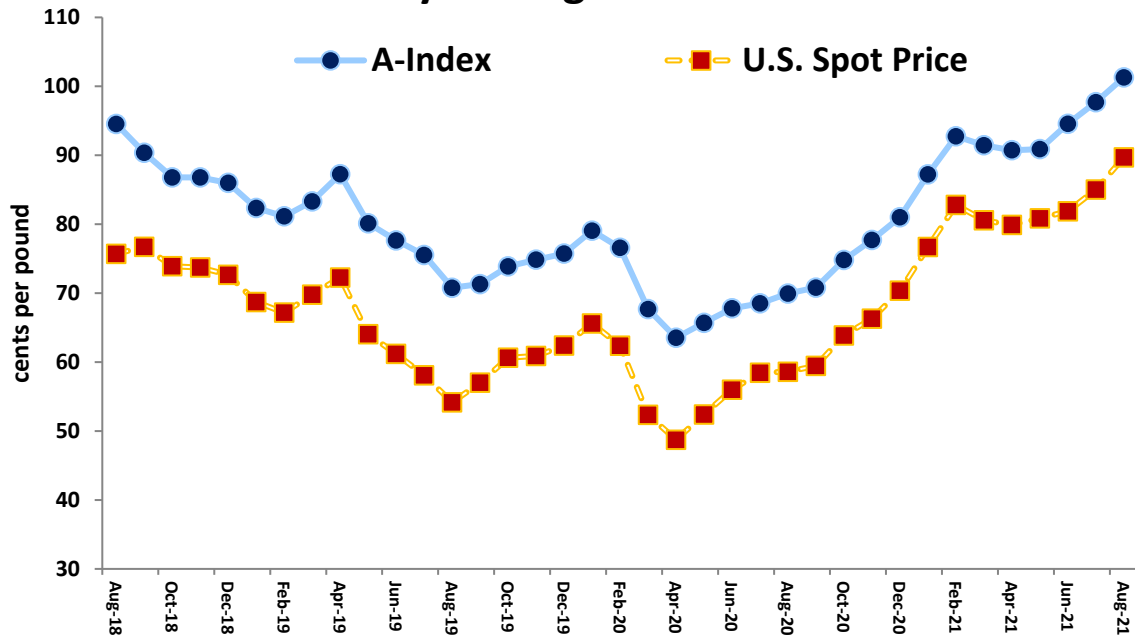

U.S. estimates are mostly unchanged. Exports are up only 20,000 bales to 16.37 million to reflect final USDA Export Sales data and August 2020 - July 2021 Census shipments. The final export estimate is the mid-point between USDA Export Sales and U.S. Census. Consumption is 50,000 bales higher with ending stocks falling by the same amount. The U.S. season-average farm price is unchanged at 66.5 cents per pound.

## **Prices**

The A-index and U.S. spot price were higher for the fourth consecutive month in August and the monthly average for the A-Index reached a 10-year high. Robust global demand for nearby old-crop cotton strengthened the A-Index, especially amidst tighter available supplies. The U.S. spot price edged higher amid tight nearby supplies of old crop and larger speculative long positions on the ICE exchange. All cotton put up for sale in August by China's State Reserve sold out for the second consecutive month, signifying robust demand for nearby supplies in the world's largest consuming market.
