

Cotton: World Markets and Trade

2022 U.S. Cotton Product Imports Decline from Last Year's Surge

Source: OTEXA (Office of Textiles and Apparel); Note: ROW (Rest of World)

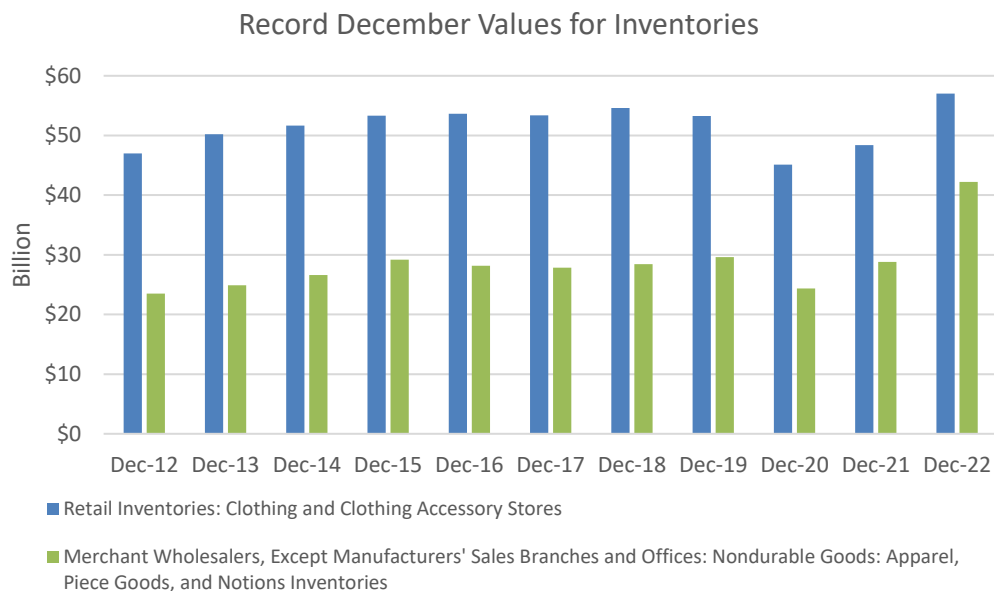

The United States is the largest importer of cotton products (i.e., cotton apparel, home textiles, etc.) and nearly all U.S. consumer retail purchases of these goods are imported. Cotton product imports in calendar year 2022 were down after reaching the highest level in a decade (measured in square meter equivalent).

According to data from the International Trade Administration’s Office of Textile and Apparels (OTEXA), 2022 cotton products were a record \$57.0 billion, nearly \$8.0 billion higher than the previous year. Despite lower import volumes, higher value was attributed to greater unit values and U.S. consumers’ sustained demand for goods. Robust levels of consumer discretionary income, low unemployment, and higher wage growth have all supported strong purchases despite consumer inflation.

China remained the largest cotton product supplier for the 20th consecutive year. This was despite Section 301 tariffs implemented in 2019 amid the U.S.-China trade dispute and the Uyghur Forced Labor Prevention Act (UFLPA) that went into effect on June 21, 2022 (a Customs and Border Protection Withhold Release Order was in place before the UFLPA). The new federal law establishes a rebuttable presumption that the importation of any goods, wares, articles, and merchandise mined, produced, or manufactured wholly or in part in the Xinjiang Uyghur Autonomous Region of the People’s Republic of China are barred from entry into the United States due to the utilization of forced labor. The Xinjiang autonomous region produces roughly 90 percent of China’s cotton, making much of Chinese cotton product exports potentially susceptible to the law.

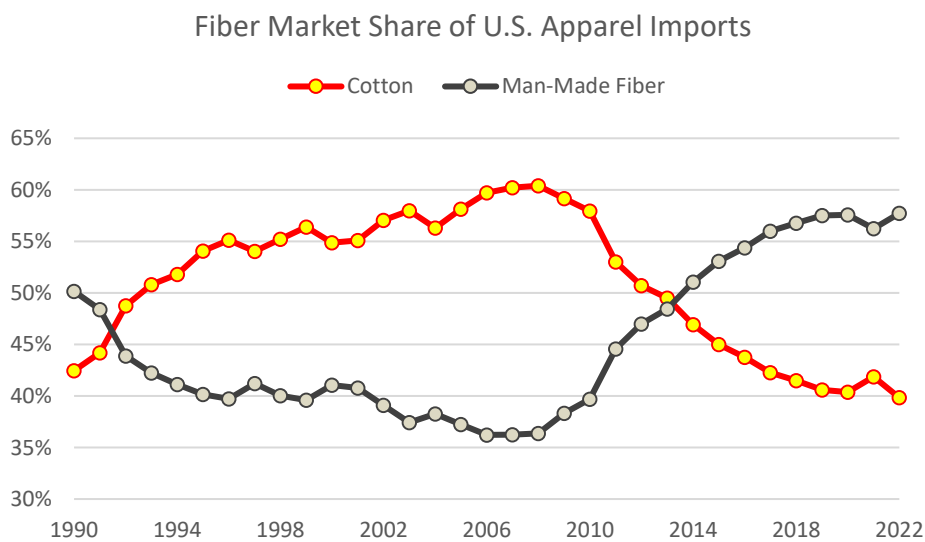

After 2 consecutive years of robust U.S. imports of cotton products, inventories have swelled and slowed subsequent retailers’ product orders. According to U.S. Census data, retailers’ apparel

inventories were a record value for the month of December (seasonally adjusted, nominal value, and includes apparel consisting of all fibers, not just cotton). In addition, wholesalers witnessed record December inventories for apparel, piece goods, and notions (sewing and hair accessories, etc.).

Source: U.S. Census; Note: Seasonally Adjusted and Nominal Value

Cotton's market share of total apparel imports (including all fibers) fell from the previous year to roughly 40 percent. Man-made fibers (MMF) including polyester, nylon, spandex, and acrylic tied its record for market share among all U.S. apparel imports at nearly 60 percent. China is the largest manufacturer of man-made synthetic yarns (which are ultimately used to manufacture MMF apparel), accounting for roughly 60 percent of world production. For the past decade, competitively priced MMF products have been a major factor slowing global growth in cotton consumption.

Source: FAS calculation using OTEXA data

2022/23 Outlook

Global production is up from the previous month to 115.1 million bales and attributed to higher production in China, Australia, and Uzbekistan more than offsetting India's lower crop.

Consumption is forecast down more than 500,000 bales from the previous month due to lower consumption in Pakistan, Turkey, Bangladesh, and Indonesia due to an array of country-specific factors. Pakistan's macroeconomics woes persist (documented in last month's publication [here](#)) and both Pakistan and Bangladesh are experiencing issues opening and executing letters of credit along with declining profit margins amidst higher electricity costs. Turkey's earthquake adversely affected mills in the area and Indonesia imports are forecast at the lowest level since 1990.

Global trade is forecast down roughly 800,000 bales from the previous month to 39.6 million bales, the lowest level in 6 years. This month's adjustments are mostly attributed to lower global consumption.

Global ending stocks are forecast up more than 2.0 million bales to 91.1 million and mostly attributed to changes in China. China's beginning and ending stocks were revised higher because of a downward revision to consumption in 2021/22 and higher 2022/23 production.

The U.S. balance sheet is unchanged from last month, and the projected U.S. season-average farm price is also unchanged at 83 cents per pound.

Global Cotton Prices

Notes: **A-Index** is the average of the five cheapest quotations (quality being Middling $1\frac{1}{8}$) for Cost and Freight (CFR) at a Far Eastern Port; **U.S.** is the simple average of spot quotations reported by the Agricultural Marketing Service; **China** is the reported China Cotton Price Index (i.e. CCIndex 3128B) and reflects the national weighted average of cotton (3128B grade) delivered to more than 200 enterprises in China; **India** is the Shankar-6 (grade 29-

3.8-76) spot price; **Brazil** is the delivered price in São Paulo city (grade strict low middling); **Pakistan** is the ex-gin price in Karachi.

Changes Since February WASDE (cents per pound)

	A-Index	U.S.	China	India	Brazil	Pakistan
6-Feb	100.7	81.1	106.6	94.7	101.0	97.2
6-Mar	98.9	82.3	102.2	97.2	96.6	88.2
Change	-1.8	1.2	-4.4	2.5	-4.4	-9.0

Global cotton prices were mostly unchanged since last month’s WASDE with prices on the Intercontinental Exchange (ICE) settling at roughly 85 cents per pound. Relatively stronger U.S. export sales were offset by a stronger U.S. Dollar index and expectations for higher-than-expected interest rate hikes by the U.S. Federal Reserve. The Dow Jones Industrial Average and S&P Retail Index were also down from the previous month and further capped a rise in cotton futures prices.

Both China and Pakistan spot prices were down on weaker exchange rates relative to the U.S. dollar. Lower Brazil prices reflected slower-than-expected demand as witnessed by lower exports. India prices were up on stronger domestic demand amid higher operating rates by India’s spinning mills.

2022/23 U.S. Shipments & Outstanding Sales (August 1 - February 23)
