

Cotton: World Markets and Trade

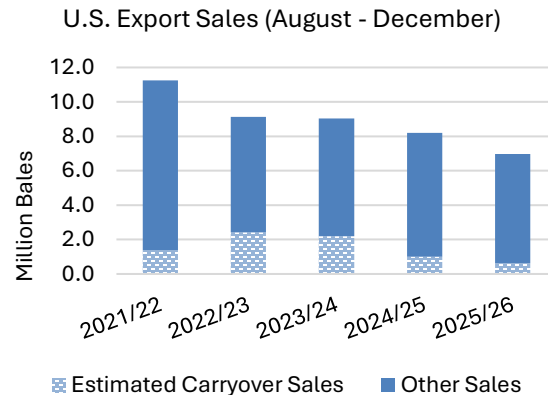

U.S. Cotton Exports Forecast Above 2024/25 Despite Slower Sales

Source: USDA Export Sales Reporting; USDA PS&D

U.S. cotton exports are forecast at 12.2 million bales in marketing year 2025/26 (August 2025 – July 2026), 300,000 bales more than the volume exported in 2024/25. In the first 5 months of the marketing year, the United States shipped 3.2 million bales, 100,000 bales above the quantity exported in the same period a year earlier. However, export sales continue to lag previous years and are currently 15 percent below 2024/25.¹

As of January 1, U.S. export sales equaled 7.0 million bales compared to 8.2 million in 2024/25. Part of this gap occurred in the first week of the marketing year when outstanding sales from the previous marketing year are generally carried into the new one. Historically, these sales averaged more than 2.0 million bales but were half that in 2024/25 and fell again in 2025/26 with carryover sales of only about 600,000 bales.

The lower volume of outstanding sales reflects the preference of spinning mills to buy cotton only for nearby requirements rather than purchasing in advance. This practice became common in 2024/25 and continues into the current marketing year as spinning mills cope with stagnant textile demand and changing tariff policies. Additionally, Brazil became the top cotton exporter in 2023/24 and now dominates the global market between October and January before the market transitions to U.S. supplies in February.

¹ For USDA Export Sales Reporting data and definitions of attributes see <https://apps.fas.usda.gov/esrquery/>

Despite slower sales and flat growth in global cotton consumption, U.S. export shipments have remained above last year. Increased beginning stocks and a projected decline in domestic use more than offset lower U.S. production, leading to higher exportable supplies in 2025/26. Furthermore, global trade is forecast up 700,000 bales year over year on higher imports by China, Turkey, Egypt, and Vietnam. Vietnam imports are forecast up only slightly, but the United States is regaining market share with total export commitments to Vietnam at the highest in 6 years for this week in the marketing year. This surge in demand from Vietnam has allowed U.S. exports to remain resilient in the face of less demand from China.

U.S. Export Sales and Shipments (August - December)

USDA Methodology for Calculating U.S. Cotton Exports

Please refer to the September 2024 circular titled [Historical Revisions to U.S. Cotton Exports and Stocks](#) for a discussion on the most recent USDA methodology. Effective September 2024, USDA incorporates an additional and internal data source to derive the final export estimate used in the balance sheet.

2025/26 Outlook

Global production is forecast down nearly 400,000 bales to 119.4 million as smaller crops in India, the United States, Argentina, and Turkey more than offset a larger China crop. Global consumption is forecast up more than 300,000 bales to 118.9 million. Higher consumption by China more than offsets lower consumption by Turkey and Nicaragua. While global production is up nearly 1 percent year-over-year, consumption is flat.

Global trade is nearly unchanged at 43.8 million bales. Higher exports from Australia and India more than offset lower exports from Argentina and Turkey. Higher imports by India more than offset lower imports by Turkey and Nicaragua.

Global ending stocks are reduced nearly 1.5 million bales to 74.5 million as lower ending stocks in India, the United States, Australia, Argentina, and Turkey more than offset higher ending stocks in China.

The U.S. season-average farm price for 2025/26 is projected up 1 cent to 61 cents per pound.

2025/26 Trade Outlook (1,000 480-lb Bales)				
Major Importers:				
	Previous	Current	Change	Reason
WORLD	43,732	43,757	25	
India	2,800	3,000	200	Import data
Nicaragua	150	100	-50	U.S. export shipments
Turkey	4,700	4,600	-100	Import data
Major Exporters:				
	Previous	Current	Change	Reason
WORLD	43,742	43,772	30	
Argentina	750	600	-150	Lower production
Australia	5,100	5,300	200	Export data
India	1,300	1,400	100	Export data
Turkey	1,000	900	-100	Lower production

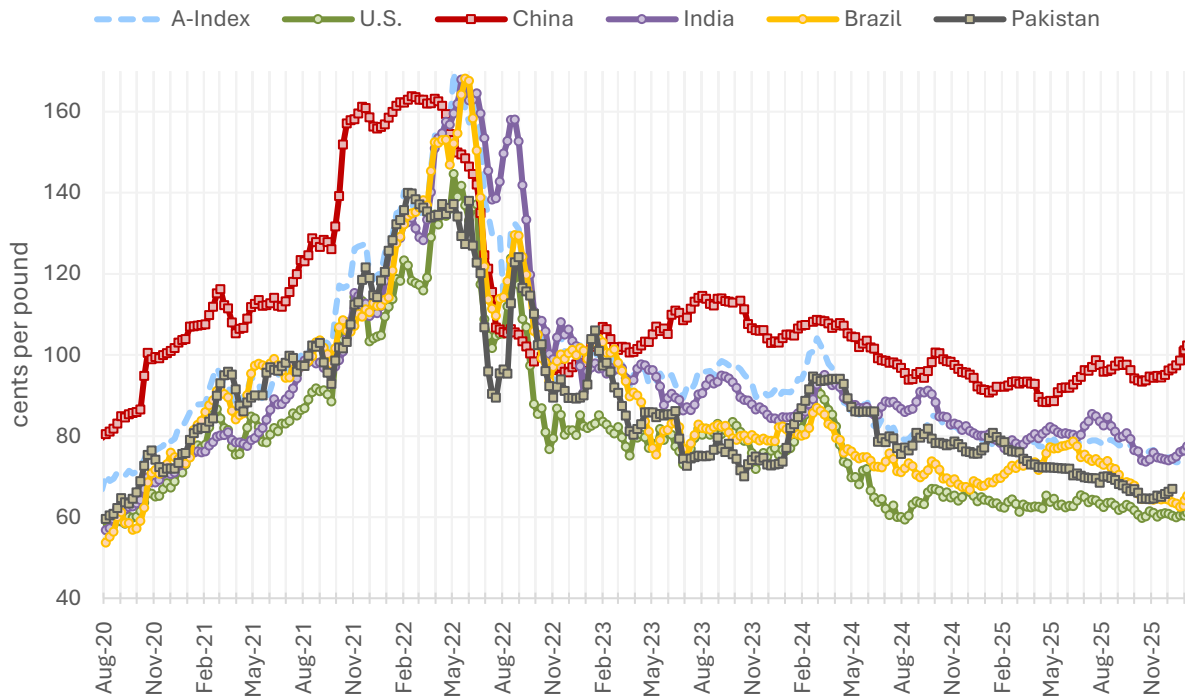

Futures and Spot Prices

Since the last WASDE report, cotton futures on the Intercontinental Exchange (ICE) are unchanged at around 64 cents per pound.

Changes Since December WASDE (cents per pound)					
	A-Index	U.S.	China	India	Brazil
5-Dec	74.2	60.4	96.1	74.1	62.9
8-Jan	74.8	60.8	103.7	78.0	64.9
Change	0.6	0.4	7.6	3.9	2.0

Note: The Karachi Cotton Association suspended publication of Pakistan cotton price statistics as of December 12, 2025.

Notes on Price Series

A-Index is published by Cotton Outlook and reflects the average of the five cheapest quotations (quality being middling 1^{1/8} inch) of upland cottons traded internationally; the delivery price reflects Cost and Freight (CFR) to a Far Eastern Port.

U.S. is the simple average reported by the Agricultural Marketing Service, Free On Board (FOB) car/truck across seven U.S. spot markets of grade strict low middling.

China is the reported China Cotton Price Index (i.e., CCIndex 3128B) and reflects the national weighted average of middling grade cotton; the delivery price is at the textile mill in China.

India is the Shankar-6 (middling grade 29-3.8-76) spot price and is reported ex-gin (at the gin yard) in Gujarat.

Brazil is strict low middling and reflects the delivered price to a mill in São Paulo.

Pakistan is the ex-gin (at the gin yard) price in Karachi reflecting a 1^{1/16} inch staple and grade 3.

Production, Supply, and Distribution (PSD) Attributes for Cotton

(Note: Area Harvested is reported in thousand hectares and all other attributes in thousand 480-lb bale equivalents.)

Marketing Year: August – July, for example, the 2024/25 marketing year is August 1, 2024 – July 31, 2025.

Area Harvested: The area of land planted to cotton from which seed cotton is harvested.

Beginning Stocks: The quantity of cotton lint physically located within a country on August 1 (the first day of the marketing year, for example, August 1, 2023 of the 2023/24 marketing year) and includes cotton lint in transit. Beginning stocks equal the ending stocks of the previous year.

Production: The quantity of cotton lint ginned from harvested seed cotton during the marketing year and does not include cotton [linters](#) (short fibers attached to cottonseed).

Imports/Exports: The quantity of cotton lint physically imported into or exported from the country during the respective marketing year. This includes the Harmonized System (HS) code specific to the four-digit heading 5201 (Cotton, not carded or combed) and specific to unprocessed cotton lint. For some countries, imports include cotton bales in bonded warehouses that have *and* have not cleared customs.

Domestic Use: Also referred to as cotton consumption or mill use. All cotton lint that has been processed during the marketing year and excludes cotton linters. Domestic yarn production (100% cotton fiber or cotton blended with other fibers) usually accounts for more than 90 percent of domestic use. Yarn production occurs at a spinning mill and hence is also referred to as “spinning”. Use outside of yarn production typically includes nonwoven fabric production (see [nonwoven products](#)).

Ending Stocks: The quantity of cotton lint physically located within a country on July 31 (the last day of the marketing year, for example, July 31, 2024, of the 2023/24 marketing year) and includes cotton lint in transit. Ending Stocks will always equal the following year’s beginning stocks.

Loss: Cotton that has been destroyed or cannot be accounted for. Loss may also include “negative loss” when the estimates of Ending Stocks exceed the difference between **Total Supply** and total use (total use is equal to **Exports** plus **Domestic Use**).

Other Terminology

Cotton Textiles: Refers to both the yarn and fabric industries. This mostly pertains to spinning mills (yarn manufacturers), weavers (woven fabric manufacturers), and knitters (knit fabric manufacturers).²

Cotton Products: Refers to end-use products including apparel and home goods (e.g., towels and bed sheets) as well as [nonwoven products](#) (e.g., medical and hygiene products). When referencing “cotton product” trade data, certain imports are not included that contain cotton fiber. Circular analyses include HS (Harmonized System) codes that specify cotton as the primary fiber and typically state “of cotton” in the product code description.

Garment Manufacturers: Typically reflects cut-and-sew and finishing operations to assemble and produce the final end-products such as apparel (i.e., cotton products).

Example of a Cotton Supply Chain

Cotton planted [**Farm**] → Cotton harvested [**Farm**] → Cotton ginned to separate lint from seed and compressed into bale (represented as Production in the PSD) [**Gin**] → Cotton bales spun into yarn or fibers processed into nonwoven products (represented as Domestic Use in the PSD) [**Spinning Mill**] → Yarn woven or knit into fabric [**Fabric Mill**] → Fabric is dyed and processed [**Fabric Mill**] → Finished fabric is cut-and-sewn into apparel or other finished product [**Garment Manufacturer**] → [**Retailer**]

The Foreign Agricultural Service (FAS) updates its production, supply, and distribution (PSD) database for cotton, oilseeds, and grains at 12:00 p.m. on the day the *World Agricultural Supply and Demand Estimates* (WASDE) report is released. This circular is released by 12:15 p.m.
